```
[layerslider id="38"]
```

Use PHP function:

```
<?php layerslider(38) ?>
```

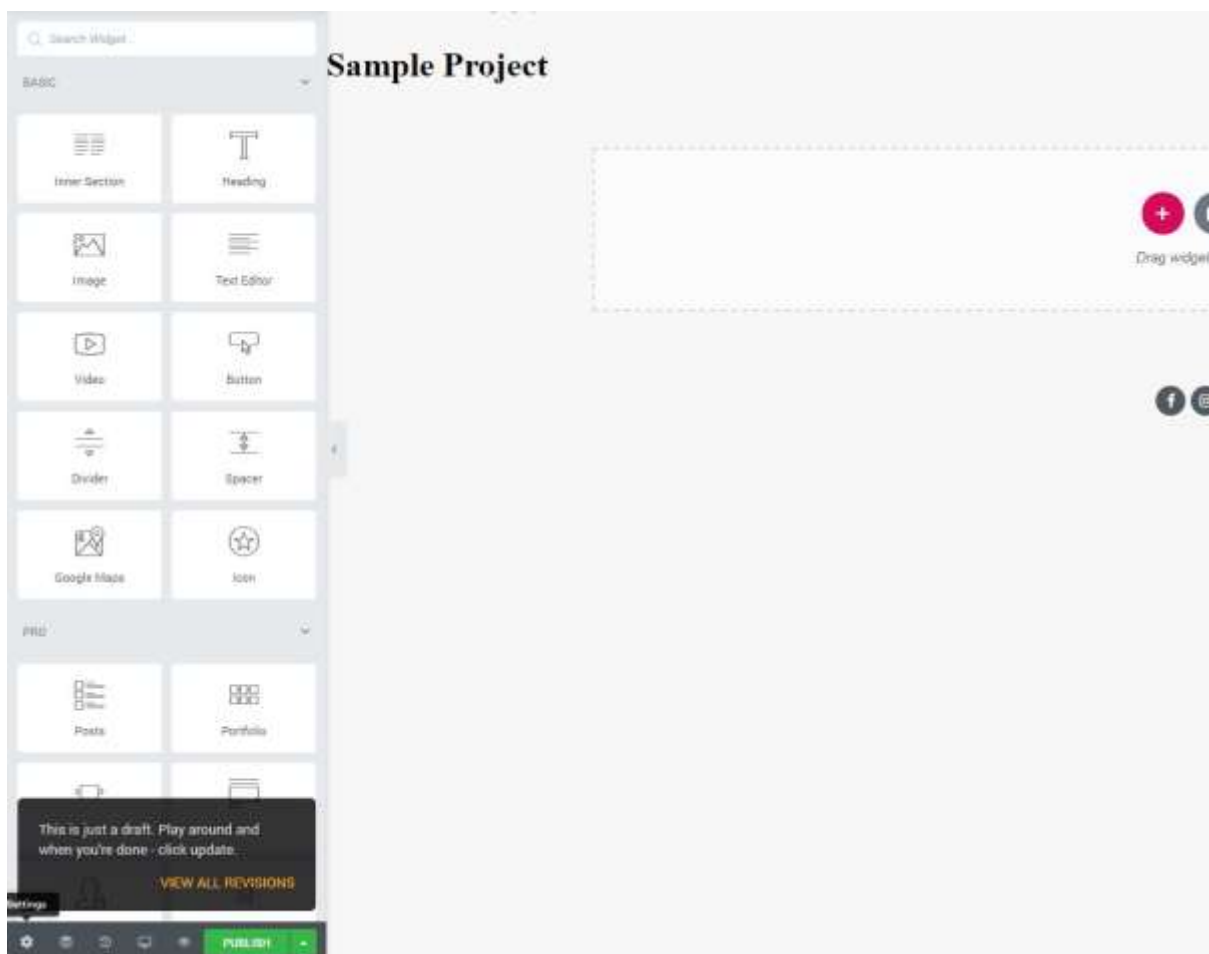

Next, Add New Under Posts

The screenshot shows the WordPress 'Add New Post' editor. The main content area is empty. On the right sidebar, the 'Categories' section is expanded, showing a list of categories. The 'Project Page' category is selected, indicated by an arrow and the text 'choose project page'. Below the categories, there is a note: 'depending on the tags, click choose from the most used tags'. The 'Publish' button is visible at the bottom right of the sidebar.

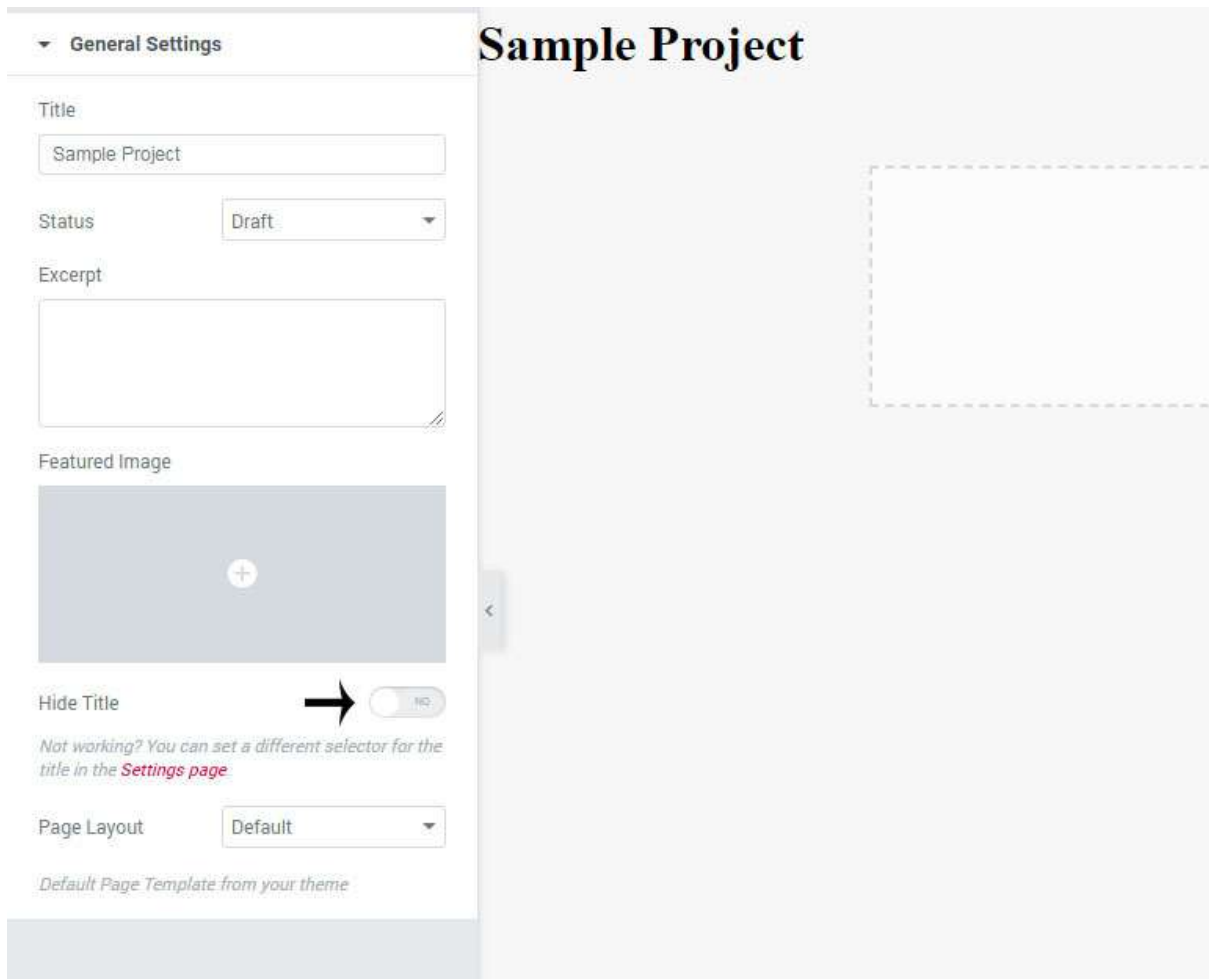

Choose the tags that is related to the project, example Residential. This is to ensure that this project falls under the residential on the Project Page.

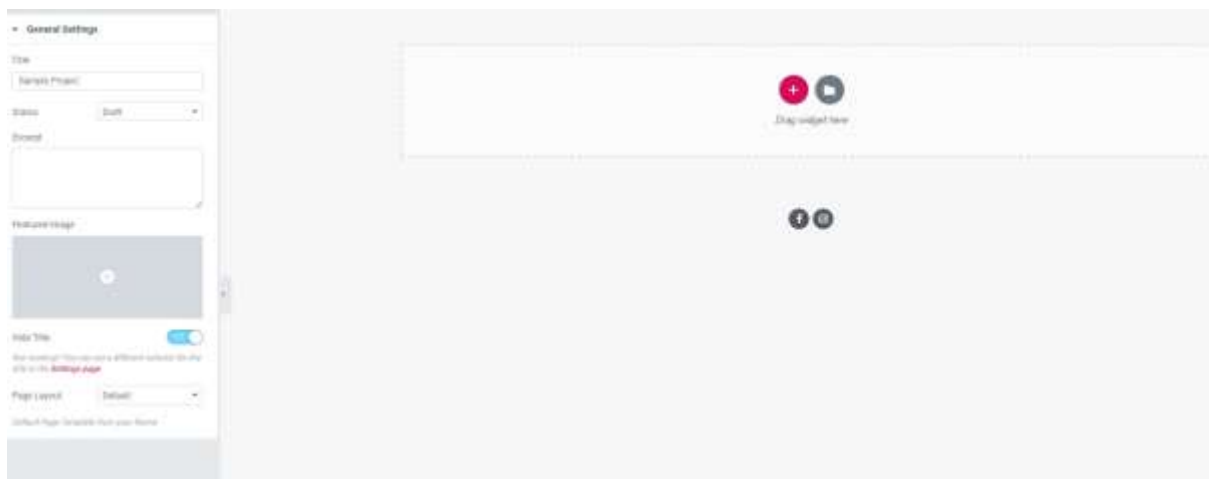

Click edit with elementor

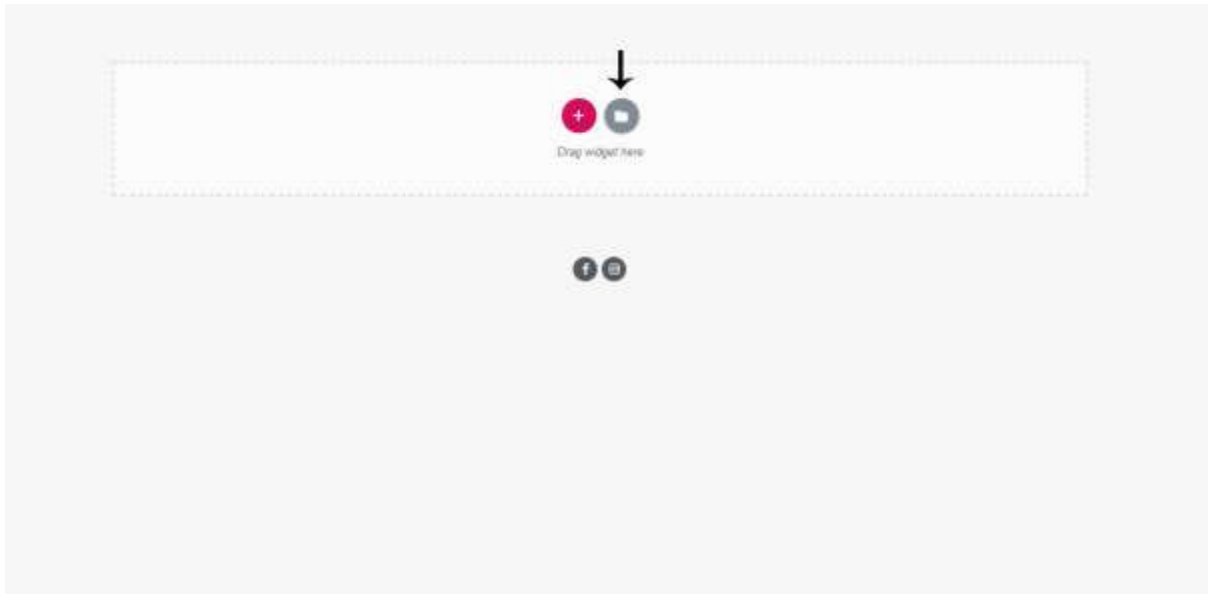

Click the wheel icon on the bottom left.

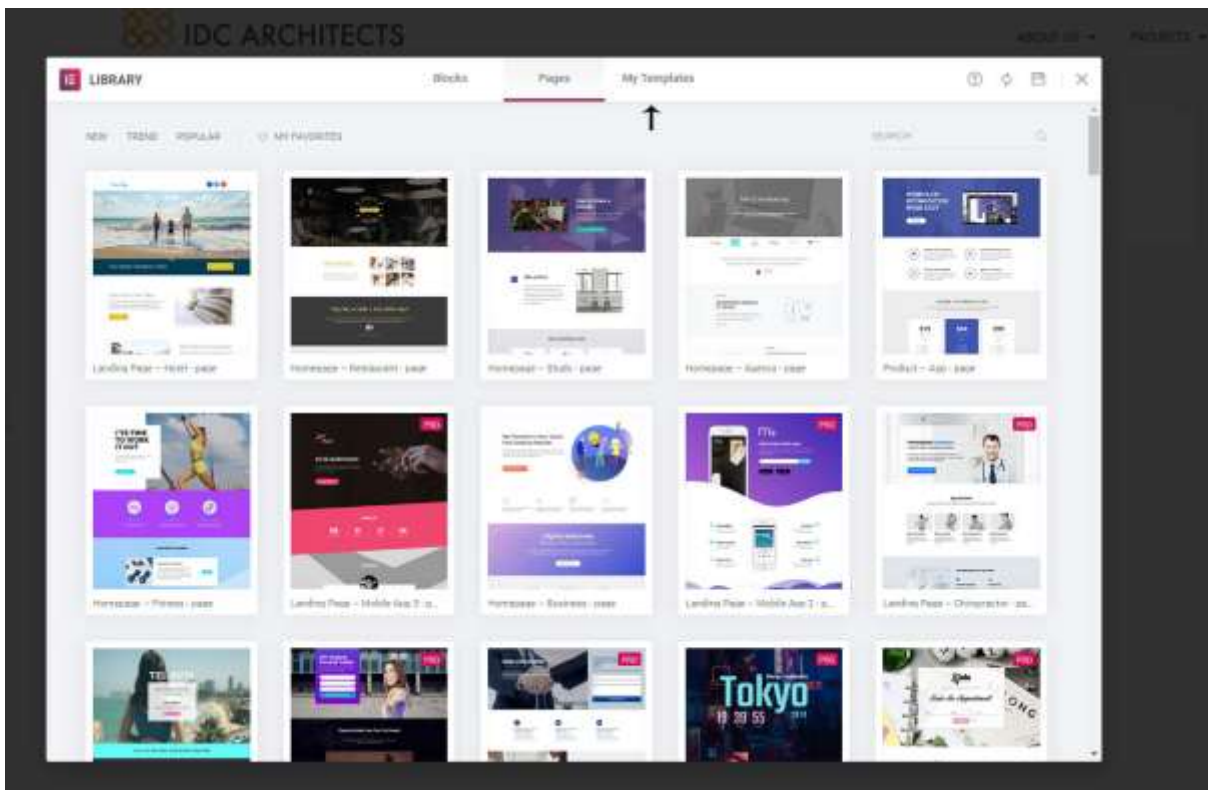

Click hide title.

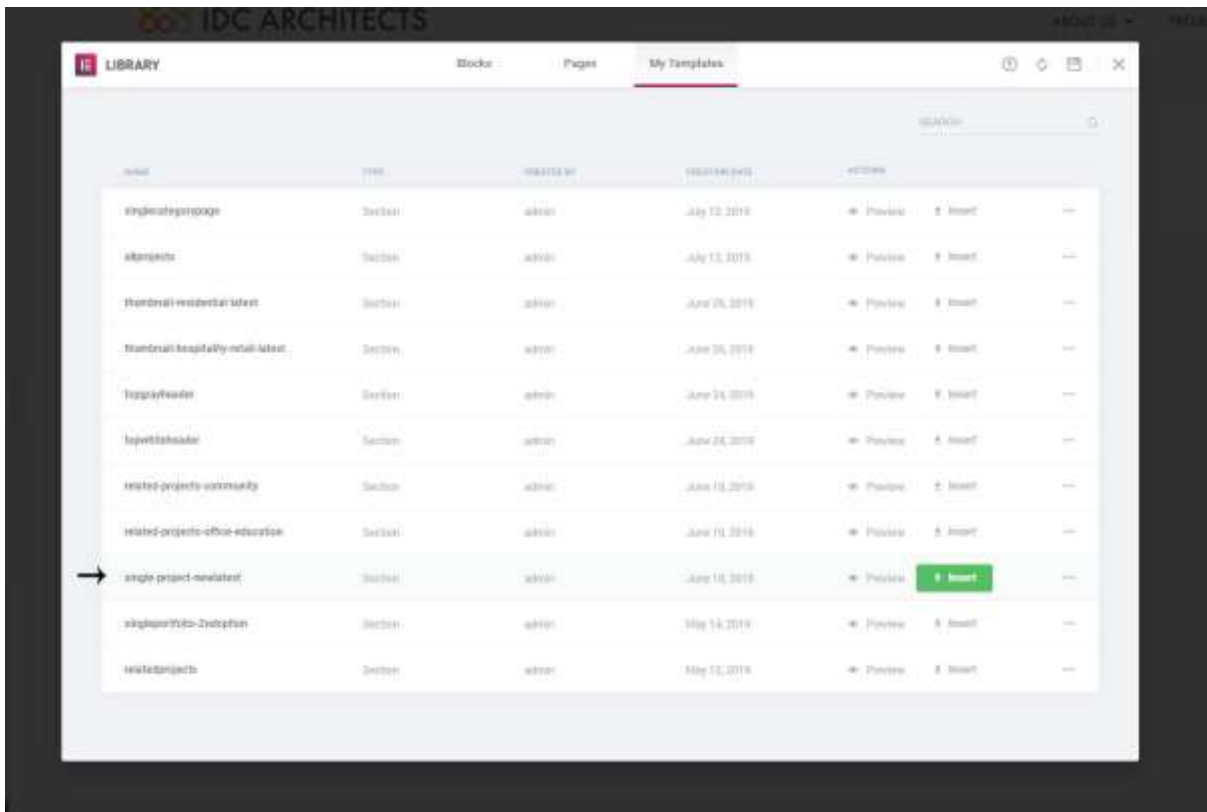

Title is hidden now as we will be adding the title below the slider.

Click the folder icon

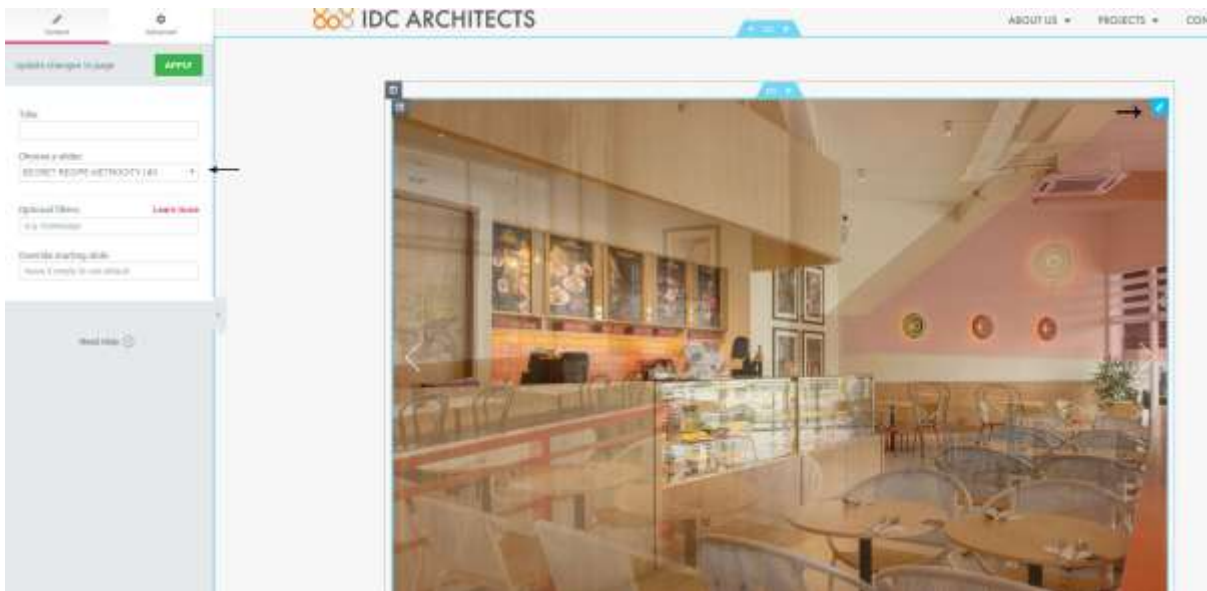

Click my templates

Look for single project newlatest

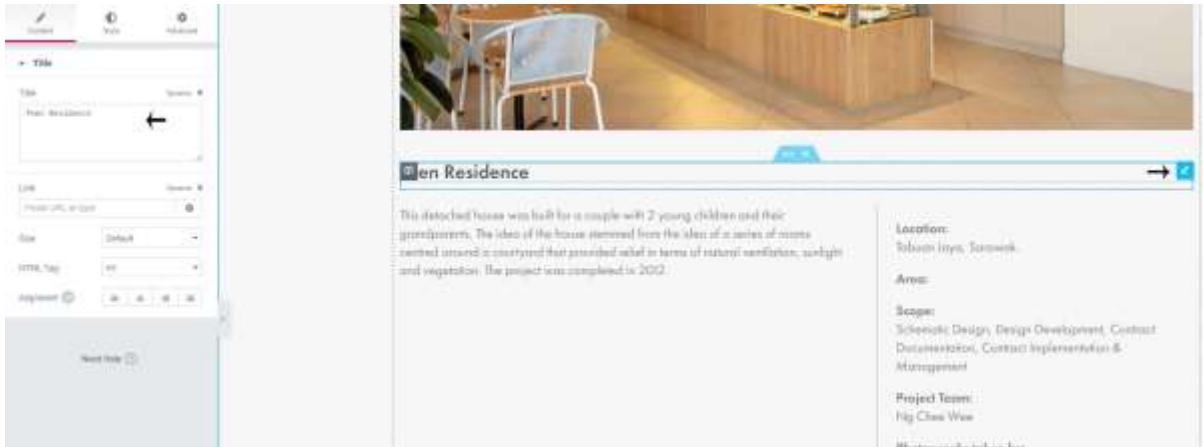

Click Insert

Click yes for import document settings

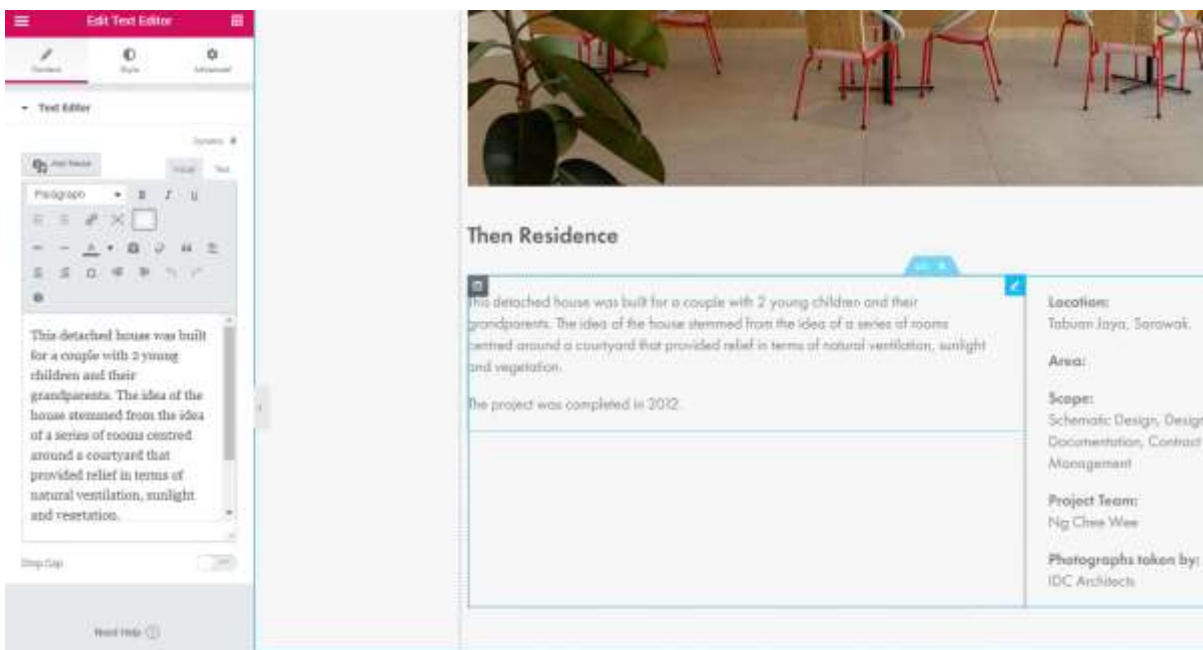

Click the pencil icon on the slider, and on the left you will see “choose a slider”. Click the dropdown list and look for the slider you have created.

Next, rename the title and replace the content with related content.

Click the pencil icon on the related area, and you will see the field for renaming the title.

Similar to title, click the pencil icon for the content.

After replacing everything, we're going to add thumbnails for the related projects below it.

Then Residence

This detached house was built for a couple with 2 young children and their grandparents. The idea of the house stemmed from the idea of a series of rooms centred around a courtyard that provided relief in terms of natural ventilation, sunlight and vegetation.

The project was completed in 2012.

Location:

Tabuan Jaya, Sarawak.

Area:

Scope:

Schematic Design, Design Development, Contract Documentation, Contract Implementation & Management

Project Team:

Ng Chee Wai

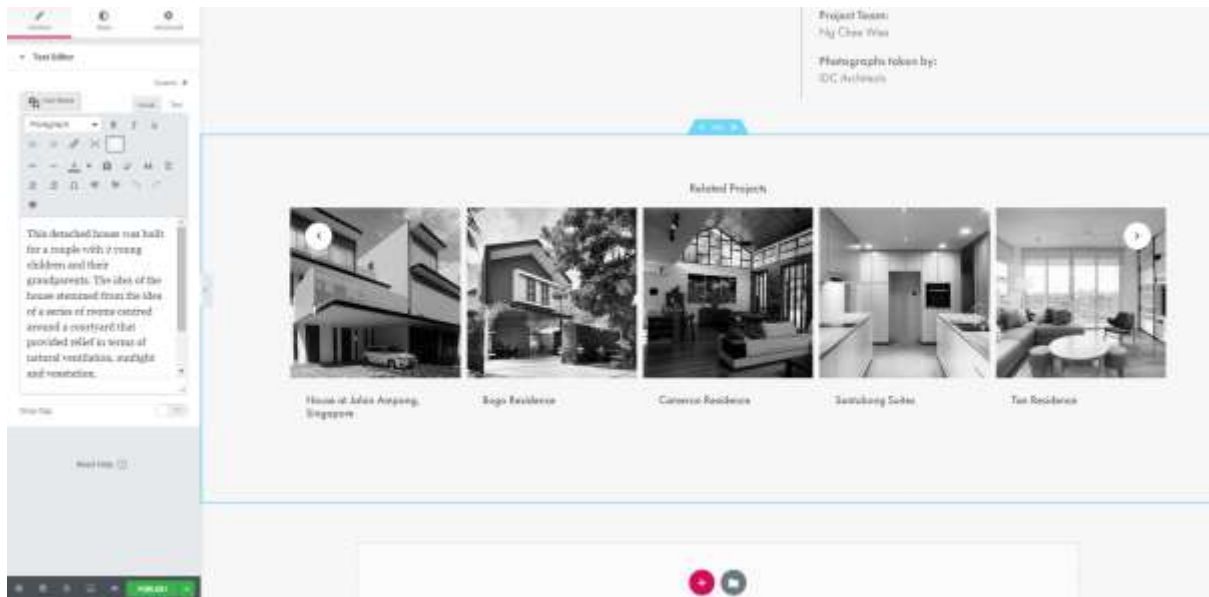

Photographs taken by:

IDC Architects
